Atomik

Making Healthcare Data Actually Work

Here's the Deal 👇

Look, we get it. Healthcare data is a pain. It's messy, it's complicated, and it never seems to play nice with anything else. That's where Atomik comes in. We've built this platform that actually makes sense, uses real standards (openEHR), and doesn't lock you into some weird proprietary system.

What You Get 📣

Clinical Data Storage	**Demographics Hub**	**Easy APIs**	**Simple Interface**
Store all your clinical stuff in one place	Patient info organized and accessible	Connect to whatever you need	Actually user-friendly (imagine that!)

The Good Stuff 🎉

- 🚀 Cuts your dev time way down
- 🔒 Uses open standards (no lock-in BS)
- 🧑‍💻 Switch databases without the headache
- 🎓 Real support from people who know their stuff
